Explosion-proof cathodic protection transformer / rectifier unit

■ Product features

- ◆ The shell of this product is welded with carbon steel or stainless steel plates, and the product is mainly composed of an explosion-proof enclosure system, a transformer, rectifier module, a control and feedback module, a protection and monitoring module, an auxiliary and communication module, etc.
- ◆ It is capable of converting industrial, frequency alternating current into stable direct current through voltage transformation, rectification, filtering and closed-loop control. Meanwhile, it is adapted to hazardous environments via its explosion-proof structure, ensuring that the protected metal structures (such as pipelines and storage tanks) achieve stable cathodic polarization to inhibit corrosion.
